

SHIELDMYLOT

PARKING & ENFORCEMENT MANAGEMENT

GETTING STARTED ·

DRIVER

Welcome. Here's how to **work a lot.**

Your driver portal is built for the field — check a plate, document a violation, and generate a tow ticket, fast. Here's the workflow.

IN THE FIELD

1

Sign in

Your portal opens to the property you're working. Select your **current property** if you cover more than one.

[Signup & first login →](#)

2

Scan or enter the plate [START HERE](#)

Use the **camera to scan** a license plate, or type it in. The system reads it and checks authorization — caps, spaces, and dashes are handled for you.

[Submitting violations →](#)

3

Check authorization

See instantly whether the vehicle is a **registered resident**, on a **visitor pass**, or **not authorized**. This is your go / no-go.

4

Document the violation

For an unauthorized vehicle, capture the **required photos** (and video where needed) — this is the evidence that goes on the ticket.

[Submitting violations →](#)

5

Generate the tow ticket

The ticket is created with your **company's branding**, the violation details, and the storage facility info. Print or send.

[Tow tickets & evidence →](#)

WHAT YOU'LL DO MOST

- ◆ Scan or look up plates — authorized or not?
- ◆ Document violations with photos/video

- ◆ Generate & print tow tickets

- ◆ Regenerate a ticket

— if enabled for your account

- ◆ Switch between your properties

GOOD TO KNOW

Scan handles formatting

Type plates however you have them written — capitals, spaces, and dashes are handled automatically.

The ticket carries your brand

Tow tickets show your company's logo and details — set by your company admin, so every ticket looks official.

Evidence stays attached

Photos and video are stored with the violation, so the record is always complete.

Need help? Contact your **company administrator** or dispatcher. · [All guides →](#)
